- B. 1. Spain 2. globe 3. North
4. land 5. Pacific
- C. 1. Sailors use an instrument called compass to find their way while sailing.
2. A globe is a model of the Earth. This model helps us study the different places on the Earth.
3. This book is called an atlas.
- D. 1. A drawing of the Earth or part of it is called a map. A map can be big or small. An atlas refers to a book of maps. Maps that are hung on walls are called wall maps. On a map, we locate places using the four directions – north, south, east and west. These days, our phones have virtual maps that help us locate places.
2. Continents are large areas of land. Asia, Africa, North America, South America, Antarctica, Europe and Australia are the seven continents on the Earth. On the other hand, oceans are very large bodies of water. The Pacific Ocean, Atlantic Ocean, Indian Ocean, Southern Ocean and Arctic Ocean are the five oceans on the Earth.
3. Around 500 years ago, Ferdinand Magellan and his crew started a long sea journey from Spain. They wanted to reach South-East Asia, in search of spices and gems. They kept moving in one direction and sailed for nearly three

years. Finally, they reached the same place from where they had started! And they learnt something new about the world around them. Their journey proved that the Earth is round in shape and not flat.
